Report of Vermicomposting and Greenhouse

a) Vermicomposting

The College has an active vermicomposting unit that is used for demonstration of vermicomposting technique to the students. The unit is also used for recycling the organic waste such as leaves and garden remains. The earthworms used for composting are monitored regularly and the composting unit is maintained at optimum humidity by regularly springling water. The compost formed is used for growth of potted plants and enhancing the quality of the garden soil.

b) Greenhouse:

A green house of approximately 52 sq. m is being maintained in the college and is used for propagating plants. The facility is mainly used for growth of plants that are required for carrying out practical work that is included in the courses run by the College. The greenhouse facility is also used for raising seedlings that is utilised for plantation during various occasions and programs carried out by the College.
